

Routiq V3 Brand Strategy & Creative *Direction*

CONFIDENTIAL REBRAND & REPOSITIONING BRIEF

PREPARED BY HVESMAR, MARCH 2026

CONFIDENTIAL

Executive Summary

Routiq is at an inflection point. The product works, and 20,893 real patient journeys prove it. The data is compelling, the behavioural science framework is differentiated, and the retention problem Routiq solves is universal across health and wellness. But the brand does not yet match the ambition. It reads as healthcare IT when it should read as a premium intelligence partner.

This document outlines a strategic repositioning that accomplishes three things simultaneously. First, it elevates Routiq into the cosmetics and aesthetics market, the highest-value, fastest-growing vertical where the retention problem is most acute and competition is nearly nonexistent. Second, it builds a brand identity that is category-agnostic at its core, so Routiq can expand into adjacent verticals like physiotherapy, chiropractic, psychology, and dental without a second rebrand. Third, it creates a visual and verbal system that makes clinic owners, predominantly female decision-makers who judge software by how it looks, stop scrolling, trust immediately, and feel understood.

The core insight driving everything is clear:

42%

VISIT ONCE AND NEVER RETURN

5.4X

MORE VALUE FROM RETURNING
PATIENTS

\$7,226

LIFETIME VALUE OF A LOYAL
PATIENT

A patient who comes 20 or more times generates \$7,226 in lifetime revenue versus \$354 for a one-visit patient. The same clinic, the same treatments, the only variable is whether someone reached out at the right moment. That is the entire business case, and the brand must make this feel inevitable, not optional.

Strategic Positioning

2.1 The Market Opportunity

The Australian cosmetic procedures market is valued at \$1.78 billion annually, with non-surgical treatments like Botox, fillers, and laser accounting for over \$1 billion. The market is growing at 9.25% per year, nearly doubling by 2034. Awareness is mainstream, as 70% of Australians know what Botox and fillers are, and 38% are considering a procedure.

Yet the tech stack serving these clinics is remarkably fragmented. Cliniko dominates as the practice management system with 60 to 70% market share in Australia, but it has no CRM, no reengagement capability, and no aesthetics-specific features. The patient reengagement layer, the exact space Routiq occupies, is almost completely unaddressed.

MARKET LAYER	DOMINANT PLAYERS IN AU	AESTHETICS-SPECIFIC?
PMS / Booking	Cliniko (~60-70%), Timely (~15-20%), Ovatu	No, all generic
CRM / Patient Comms	GoHighLevel white-labels, spreadsheets	Partially (agency-sold)
Patient Reengagement	Almost nothing systematic	No real player
Marketing Automation	Mailchimp, agency-managed	No

This is the gap. No funded competitor is specifically solving aesthetics retention in Australia. Zenoti targets enterprise chains globally. Boulevard is US-only. Pabau is expanding from the UK but lacks the behavioural science differentiation. Routiq has a genuine first-mover advantage in the Australian aesthetics reengagement layer.

2.2 Why Cosmetics Leads (But Does Not Define)

The cosmetics vertical is the strategic entry point because the economics are dramatically better than general allied health. Average treatment values range from \$203 to \$1,026 per visit. Treatment cycles are predictable, typically every 4 to 6 months for Botox and 5 to 6 months for fillers. Churn psychology is built-in, as results fade, creating natural urgency.

FACTOR	ALLIED HEALTH	COSMETICS & AESTHETICS
Avg treatment value	\$80 to \$120	\$203 to \$1,026 per visit
Treatment cycles	Irregular	Predictable (every 4 to 6 months)
Patient lifetime value	~\$500/yr	\$1,241 avg, \$7,226 for loyal patients
Churn psychology	Treatment ends	Results fade, urgency is built in
Market competition	Some tools	Almost none
Willingness to pay	Price-sensitive	Premium market

However, the brand must not become "cosmetics software." The repositioning should be vertical-aware but category-agnostic in its identity. The same 42% drop-off problem exists across physiotherapy, chiropractic,

osteopathy, and the broader \$17.5 billion allied health industry. Over 20,000 clinics already use Cliniko. The addressable market is enormous, and locking the brand into one niche would be a strategic error.

The positioning principle: Routiq is a premium intelligence layer for health, wellness, and aesthetics, built on behavioural science and real patient data. Cosmetics is where we lead. It is not where we stop.

2.3 The Competitive Moat

Routiq's differentiation is not "AI-powered automation" since every SaaS company claims that. The differentiation is the intersection of three things no competitor has combined:

1. **Real patient data.** 20,893 patient journeys analysed, with treatment-specific return intervals calculated by machine learning. This is not theoretical, it is empirical.
2. **Behavioural science framework.** Every message is grounded in published research from experts like Kahneman, Thaler, Ariely, Shotton, and Cialdini. Loss aversion, default effects, social proof, the pratfall effect, these are proven psychological principles applied to patient communication.
3. **Founder-led authority.** Daniel Welsh is building in public, educating the market on behavioural science. This creates a trust moat that no enterprise competitor can replicate.

The brand must make this moat visible and visceral. Every touchpoint from the website to social posts, outreach messages, and pitch decks should reinforce that Routiq knows something the market does not.

Brand Voice & Messaging

3.1 The Voice

The target audience lives on Instagram, values aesthetics deeply, and communicates in a register we have identified as **"Warm Expertise"**, clinical credibility blended with accessible warmth. Three distinct clusters exist within this register:

CLUSTER	CHARACTERISTICS	EXAMPLE
Educated Friend	Warm, conversational, empowering. Short sentences, myth-busting.	"He'll age gracefully. I'll do something about it."
Authoritative Results-Driven	Polished, structured. Leads with outcomes.	"We don't believe in one-off treatments, we create complete skin journeys."
Clinical Educator	Formal, information-dense. Technically accurate but emotionally flat.	"Consultation is essential to determine the appropriate modality."

Routiq's brand voice should sit between the first two: **Educated Friend meets Authoritative Results-Driven**. Warm but never casual. Data-backed but never dry. Confident but never arrogant. The voice of a colleague who has seen the data and knows what works.

3.2 Messaging Principles

The messaging framework is built on a single strategic shift: **stop selling software features, start selling predictable revenue protection**.

1. **Lead with an observation or data point**, something the clinic owner recognises from their own experience.
2. **Frame the cost of inaction**, because loss aversion is 2x more powerful than gain framing.
3. **Present Routiq as the inevitable solution**, not a pitch, but a logical conclusion from the data.

3.3 Language Guide

AVOID	USE INSTEAD
"Streamline your operations"	"Spend less time on admin, more time with clients"
"Our platform" or "Our solution"	"Your booking system" or "How you manage clients"
"Scalable"	"Ready for when you open that second location"
"Onboarding"	"Getting started" or "Setting up"
"Pain points"	"The parts of the day that drain you"
"ROI" or "KPIs"	"How many rebookings you're getting"
"Industry-leading"	Specific proof. Always specific.
"Disrupting"	They want stability and growth, not disruption

3.4 Tagline Directions

The current tagline "Behavioural Science for Patient Retention" is functional but reads like a category descriptor, not a brand line. The strongest candidate:

Every patient has a pattern. We find it.

It is data-led, confident, and creates curiosity without being clever. It works across verticals and positions Routiq as an intelligence layer rather than a tool.

Other directions worth exploring:

- "Your patients want to come back. They just forgot." Empathetic, insight-driven.
- "The science of getting patients back." Evocative, creates curiosity.
- "Predictable patients. Predictable revenue." Direct, outcome-focused.

Visual Identity & Creative Direction

4.1 Current State Audit

The existing brand has strong foundations. The logo "routiq." in lowercase with a trailing period is distinctive and confident, and it should be kept. The core Blackberry color (#1a1c12) is a sophisticated foundation. The Clay accent (#C98B7A) is warmer and more premium than the previous red.

However, several elements undermine the premium positioning:

- The blue accent reads as generic SaaS/tech. It must go.
- Raptor V3 Black is a bold, techy display face. It signals startup energy, not quiet luxury.
- There is no visual system for content, meaning no carousel templates, no social templates, and no brand guidelines.
- The messaging still says "allied health" across most touchpoints.
- Photography choices like the leather chair and clock are moody but disconnected from the aesthetics world.

4.2 The New Visual Direction

The V3 identity should feel like **Aesop meets Stripe**, bringing the warmth and materiality of a premium wellness brand combined with the intelligence and precision of a world-class technology company. This is not about mimicking either brand, but about occupying the intersection where no competitor currently sits.

PREMIUM SIGNAL	GENERIC SIGNAL
Serif or mixed typography	All sans-serif
Warm neutrals, gold, blush	Blue, teal, green
Editorial photography	Stock photos
Generous whitespace	Dense feature grids
Dark/moody sections	All-white backgrounds
Restrained palette (2 to 3 tones)	4 or more bright colours

4.3 Color Palette (V3 Proposal)

The palette should be restrained, warm, and versatile enough to work across cosmetics, wellness, and health contexts without feeling tied to any single vertical.

Core Darks: Retain and deepen the Blackberry (#1a1c12) as the primary dark. This is the brand's anchor, sophisticated, warm-black, not cold. Introduce a secondary dark like deep charcoal or warm graphite for variety in dark sections.

Warm Neutrals: Replace pure whites with warm cream/ivory tones like #F5F0EB. This immediately shifts the feel from "tech" to "editorial." Add a mid-tone taupe/stone for secondary backgrounds and card elements.

Accent: Refine the Clay (#C98B7A) into a more sophisticated, muted terracotta or blush. This becomes the singular accent, used sparingly for CTAs, highlights, and key data points. Drop the blue entirely.

4.4 *Typography System*

Typography is the single highest-impact change available. Introducing a serif immediately repositions the brand from "tech tool" to "editorial intelligence."

Headlines: A high-contrast modern serif. Candidates include Domaine Display, Playfair Display, or Ogg. These bring immediate editorial authority.

Body & UI: Retain Inter or move to a slightly warmer geometric sans like Satoshi, General Sans, or Switzer. The body typeface must be highly legible at small sizes for data dashboards and UI elements.

Data & Numbers: Consider a monospaced or tabular-figure variant for statistics and data visualizations. When Routiq presents numbers like "42%" or "\$7,226", they should feel precise and authoritative.

4.5 *Photography & Imagery Direction*

Use: Abstract textures like skin-like surfaces, soft fabrics, natural materials, soft directional lighting, warm tones, and close-up details that suggest precision and care. Think editorial beauty photography, focusing on the mood rather than the subject.

Avoid: Stock photos of smiling doctors, generic office environments, bright clinical settings, and technology-forward imagery like screens, dashboards, and code. The product is technology, but the brand should feel human.

4.6 *The Logo*

The current "routiq." mark is strong. The lowercase treatment with the trailing period communicates confidence and modernity. The recommendation is to **keep the logotype** but refine its presentation:

- Ensure it works beautifully in the new serif/sans pairing context, which may require slight letter-spacing adjustments.
- Create a compact icon mark, like the "r." or a geometric abstraction, for social avatars, favicons, and small-format use.
- Develop clear usage guidelines for dark/light backgrounds with the new palette.

Website Redesign Strategy

5.1 Current Site Assessment

The current site is well-structured and communicates the core value proposition effectively. The headline "Your patients wanted to come back. They just forgot." is excellent. The data points are compelling. The live AI demo widget is a smart trust-builder. The case study with Surf Rehab Physiotherapy provides real social proof.

What is not working is the visual execution, which does not match the premium positioning the brand needs. The dark theme with blue accents reads as generic SaaS. The typography is functional but not distinctive. The photography is disconnected from the aesthetics world. The testimonials reference generic clinic terms rather than cosmetics-specific outcomes.

5.2 Redesign Principles

The new site must accomplish four things in the first 3 seconds:

1. **Signal premium.** The clinic owner should feel like this software belongs in their world, not in a developer's world.
2. **Establish authority.** The data and behavioural science positioning must be immediately visible.
3. **Create trust.** Social proof from recognisable clinic types like aesthetics, medspas, and skin clinics must be prominent.
4. **Drive action.** The path to "Book a Demo" or "Start Free Trial" must be frictionless and feel like a natural next step.

5.3 Proposed Site Structure

Section 1: Hero. Retain the headline. Elevate it with the new serif typography on a warm, editorial background. The hero should feel like the opening page of a premium magazine, not a SaaS landing page. Key stats presented as elegant typographic elements, not cards or badges.

Section 2: The Problem (Data Story). Visualise the "One-Visit Cliff" and the "Golden Window" using minimal, elegant data visualizations. These should feel like information design, not SaaS dashboards.

Section 3: How It Works (Patient Journey). Walk through the five intervention points using a clean, editorial layout. Each stage gets a brief description and the behavioural science principle behind it.

Section 4: Social Proof. Redesign testimonials to feature cosmetics-specific language and outcomes. Include clinic names, owner photos if available, and specific metrics.

Section 5: The Science. A dedicated section on the behavioural science framework. Present the key principles with brief, accessible explanations and real examples from the patient data.

Section 6: Pricing. Clean, spacious, premium. Two tiers with clear value differentiation. Frame the cost against the revenue recovered.

Section 7: Founder Section. Introduce Daniel Welsh briefly. This humanises the brand and connects the company brand to the founder brand.

Section 8: CTA & Footer. A strong closing statement that reinforces urgency using the Golden Window data. Clean footer with essential links.

Social Media & Content Strategy

6.1 Platform Strategy

Daniel Welsh is the content engine. The founder brand and company brand must feel connected but distinct. Daniel is the voice, and Routiq is the system.

PLATFORM	ROLE	CONTENT TYPE
LinkedIn	Primary thought leadership	Long-form posts, carousels, behavioural science breakdowns
Instagram	Clinic owner engagement	Visual carousels, data cards, behind-the-scenes
YouTube	Deep-dive education	Behavioural science explainers, case studies, product walkthroughs
TikTok	Discovery & reach	Short-form data insights, myth-busting, founder energy
X (Twitter)	Real-time commentary	Quick takes, data drops, startup/SaaS community engagement

6.2 Content Pillars

Pillar 1: The Data. Real patient insights from the 20,893-journey dataset. Single data points presented as visually striking cards. These are scroll-stopping facts that establish authority.

Pillar 2: The Science. Behavioural science education. Teardowns of principles applied to real clinic scenarios. This is the founder's intellectual territory, positioning Daniel as the expert and Routiq as the application of that expertise.

Pillar 3: The Proof. Case studies, testimonials, and operational observations. Real clinics, real results. This pillar bridges education and sales without feeling like a pitch.

6.3 Visual Content System

Social templates must be fast to produce and instantly recognisable as Routiq. The system needs:

- **Data Card:** Single stat on a dark or warm neutral background, serif headline, minimal layout.
- **Carousel Template:** 5 to 8 slides, consistent typography and color system, designed for LinkedIn and Instagram.
- **Quote Card:** For testimonials and behavioural science quotes. Elegant, editorial feel.
- **Video Thumbnail:** Consistent treatment for YouTube and short-form video. Founder photo and bold text overlay.

6.4 Outreach Strategy

Solo/Founder Clinics: Instagram DM, conversational tone. Lead with a specific observation about their account. Founder-to-founder energy.

Growing Multi-Location Clinics: LinkedIn or email alongside Instagram. Acknowledge growth milestones. Frame software as infrastructure for scale.

Doctor-Led Medical Clinics: Email preferred, professional tone. Lead with clinical outcomes and compliance. Reference their medical positioning.

The Founder Brand Relationship

Daniel Welsh is Routiq's greatest brand asset. As a solo founder building in public, his personal brand creates trust, reach, and differentiation that no enterprise competitor can replicate.

The relationship should work as follows: **Daniel is the educator, Routiq is the system.** Daniel teaches behavioural science, shares data insights, and builds relationships. Routiq is the product that applies those principles at scale. The personal brand drives awareness and trust, while the company brand drives conversion and retention.

Visually, Daniel's content should share the same typographic and color DNA as Routiq but feel slightly more personal, less polished, and have more founder energy. The company brand is the refined expression, and the founder brand is the raw, authentic version of the same ideas.

Phased Execution Plan

Speed matters. The brand system should be shipped incrementally, with the highest-impact elements first.

Phase 1: Brand Foundation

Establishes the visual and verbal system that everything else builds on.

V3 Color Palette · Typography System · Logo Refinements · Brand Voice Guide · 3 Social Templates

Phase 2: Website Redesign

The highest-leverage brand touchpoint. Where outreach, content, and search all converge.

Wireframes · Visual Design · Copywriting · Development · Data Visualizations

Phase 3: Sales & Outreach System

With the brand foundation and website in place, extend the system to sales and outreach.

Pitch Deck · Case Study Template · One-Pager · Outreach Templates · Social Profile Assets

Phase 4: Content Engine

Once the system is in place, the focus shifts to consistent, high-quality content production.

Content Calendar · Video Templates · Carousel Library · Founder Brand Kit

What to Ship First

If resources are constrained and only three things can ship immediately, they should be:

1. **The serif.** Introduce the headline serif across all touchpoints like social, website header, and pitch materials. This single change does more to reposition the brand than any other visual element. It instantly signals that we are not generic SaaS.
2. **Three social templates.** A Data Card, a Carousel, and a Quote Card in the V3 system. This allows Daniel to start publishing on-brand content immediately while the website redesign is in progress.
3. **The website hero section.** Redesign just the above-the-fold experience with the new typography, palette, and a premium visual. This is what people see first from outreach links and search. It does not require a full site rebuild to have an outsized impact.
